Subject: Institutional Support and Consortium Commitment for AETERNA-QSTN Proposal

Subject: Institutional Support and Consortium Commitment for AETERNA-QSTN Proposal

Dear Members of the Evaluation Committee,

Dear Members of the Evaluation Committee,

We, the undersigned partner organization, hereby express our **unconditional institutional support** and **firm commitment to participate** in the defense research proposal **AETERNA-QSTN (Sovereign Quantum Tactical Network & Cyber-Physical Defense Shield)**, submitted under the **EDF - 2026 - RA - CYBER - QSTN** call by the coordinating applicant **AETERNA Technologies** (PIC: **865986222**).

We, the undersigned partner organization, hereby express our **unconditional institutional support** and **firm commitment to participate** in the defense research proposal **AETERNA-QSTN (Sovereign Quantum Tactical Network & Cyber-Physical Defense Shield)**, submitted under the **EDF - 2026 - RA - CYBER - QSTN** call by the coordinating applicant **AETERNA Technologies** (PIC: **865986222**).

As a key stakeholder in European defense technological sovereignty and critical infrastructure resilience, we recognize the vital necessity of securing submarine defense communication trunks, tactical command planes, and coastal landing terminals against physical tampering, kinetic sabotage, and post-quantum cryptographic surveillance.

As a key stakeholder in European defense technological sovereignty and critical infrastructure resilience, we recognize the vital necessity of securing submarine defense communication trunks, tactical command planes, and coastal landing terminals against physical tampering, kinetic sabotage, and post-quantum cryptographic surveillance.

Our Strategic Commitment to the Project:

1. **Tactical Mesh Integration (WP1):** We commit to deploying and benchmarking the lattice-based Post-Quantum Cryptographic primitives (NIST ML-KEM-1024 / ML-DSA-87) and QKD interfaces across designated landing nodes.
2. **Real-Time Signal & Threat Calibration (WP2):** We will provide tactical telemetry, acoustic benchmark datasets, and expertise to train and validate the Mojo SIMD $O(1)$ signal classification core against simulated sabotage vectors.
3. **eBPF Sentinel & SCADA Hardening (WP3):** We will integrate kernel-level eBPF apoptosis containment hooks into our SCADA operational control planes to enforce $<1.02\text{ms}$ automated isolation upon breach detection.
4. **Multispectral Cloaking Validation (WP4):** We will participate in field trials for the Multispectral Physical Asset Shielding (MPAS) system, evaluating IR thermal cloaking and radar cross-section reduction.
5. **Operational Capacity:** We confirm the availability of personnel, classified test facilities, and computing infrastructure required to achieve all milestone targets over the 36-month project lifecycle.

We are fully convinced that the technological leadership of **AETERNA Technologies** in deterministic, zero-entropy sovereign software architectures, combined with our joint operational capabilities, makes AETERNA-QSTN a landmark defense action that will decisively strengthen the European Union's security and sovereignty.

We are fully convinced that the technological leadership of **AETERNA Technologies** in deterministic, zero-entropy sovereign software architectures, combined with our joint operational capabilities, makes AETERNA-QSTN a landmark defense action that will decisively strengthen the European Union's security and sovereignty.

Sincerely,

Sincerely,
