

SECURITY COMPLIANCE DECLARATION & SOVEREIGN DEFENSE ATTESTATION

EUROPEAN DEFENCE FUND (EDF-2026-RA) // CYBER-QSTN

- **Project Acronym:** AETERNA-QSTN
 - **Proposal ID:** 101357872 (Call: EDF-2026-RA-CYBER-QSTN)
 - **Applicant Lead:** AETERNA Technologies (Pomorie, Bulgaria)
 - **Participant Identification Code (PIC):** 865986222
 - **Infrastructure Target:** Black Sea & Eastern Mediterranean Quantum Tactical Networks & Submarine Defense Trunks
-

DECLARATION OF COMPLIANCE WITH EU DEFENSE SECURITY REQUIREMENTS & CRITICAL INFRASTRUCTURE SOVEREIGNTY

I, the undersigned, acting as the Sovereign Systems Architect and authorized legal representative of **AETERNA Technologies**, hereby declare and certify the following security compliance metrics regarding the deployment and operation of the **AETERNA-QSTN (Quantum Sovereign Tactical Network & AIGIS Shield)** system:

I, the undersigned, acting as the Sovereign Systems Architect and authorized legal representative of **AETERNA Technologies**, hereby declare and certify the following security compliance metrics regarding the deployment and operation of the **AETERNA-QSTN (Quantum Sovereign Tactical Network & AIGIS Shield)** system:

1. Zero Cloud Dependency & Sovereign Data Fortress

The AETERNA-QSTN control plane operates under a strict **Zero-Entropy, On-Premise Execution** paradigm. There is no transmission of telemetry, packet headers, metadata, or phase shift statistics to third-party or non-EU cloud service providers. All Distributed Acoustic Sensing (DAS) and State of Polarization (SOP) monitoring data is processed locally at defense-hardened landing-station edge nodes within the sovereign territory of the European Union.

The AETERNA-QSTN control plane operates under a strict **Zero-Entropy, On-Premise Execution** paradigm. There is no transmission of telemetry, packet headers, metadata, or phase shift statistics to third-party or non-EU cloud

service providers. All Distributed Acoustic Sensing (DAS) and State of Polarization (SOP) monitoring data is processed locally at defense-hardened landing-station edge nodes within the sovereign territory of the European Union.

2. Clean-Room Software Stack & Post-Quantum Cryptographic Readiness

All core mathematical layers, including the real-time subsea signal classifiers, are built using a native, vectorized codebase (compiled via Mojo SIMD and pure Rust with integer-only math). We guarantee that: * Lattice-based post-quantum cryptography (**NIST ML-KEM-1024 / ML-DSA-87**) is embedded natively, eliminating quantum harvest risks. * No software libraries or hardware components in the hot execution path originate from jurisdictions outside of the European Union or NATO member states. * No closed-source, proprietary components from third countries are utilized, bypassing logical backdoors. * The system is compliant with the **EU 5G Toolbox, EDF Regulation (EU) 2021/697 Article 9(4)**, and critical defense infrastructure supply-chain guidelines.

We guarantee that: * Lattice-based post-quantum cryptography (**NIST ML-KEM-1024 / ML-DSA-87**) is embedded natively, eliminating quantum harvest risks. * No software libraries or hardware components in the hot execution path originate from jurisdictions outside of the European Union or NATO member states. * No closed-source, proprietary components from third countries are utilized, bypassing logical backdoors. * The system is compliant with the **EU 5G Toolbox, EDF Regulation (EU) 2021/697 Article 9(4)**, and critical defense infrastructure supply-chain guidelines.

3. Active Cyber-Physical Defense & eBPF Process Isolation

Landing-station SCADA terminals are hardened using kernel-level **eBPF (Extended Berkeley Packet Filter)** **Sentinel** containment modules. In the event of physical fiber tampering or line tapping, AETERNA-QSTN triggers instant process apoptosis and quantum key revocation in **under 1.02ms**, preventing data extraction without relying on traditional network routing layers which are vulnerable to lateral exploits.

Landing-station SCADA terminals are hardened using kernel-level **eBPF (Extended Berkeley Packet Filter)** **Sentinel** containment modules. In the event of physical fiber tampering or line tapping, AETERNA-QSTN triggers instant process apoptosis and quantum key revocation in **under 1.02ms**, preventing data extraction without relying on traditional network routing layers which are vulnerable to lateral exploits.

4. Compliance with EU Regulatory Frameworks

The proposed system architectures and organizational controls of AETERNA Technologies are fully compliant with: * The **NIS2 Directive** (Directive EU 2022/2555) on cybersecurity risk-management measures. * The **CER Directive** (Directive EU 2022/2557) on critical entity resilience. * The **General Data Protection Regulation (GDPR)**, as all transit telecommunication data is completely isolated and never stored or inspected. * The **EU AI Act**, certifying that our real-time Mojo classifiers operate as deterministic mathematical signal separators and do not engage in biometric

tracking or unvetted high-risk profiling.
